
Create a life size Eagle for your classroom wall.

- Project the silhouette onto a large piece of bulletin board paper.
- Adjust the projector until the eagle has a wing span of 80 inches and is about 32 inches tall.
- Trace the eagle's outline, adding details such as feathers and eyes.
- If you use brown paper, students can paint the white head and tail feathers and yellow bill.
- If you cannot adjust the projector in the classroom, copy this onto transparency film.
- Place the overhead projector where you can adjust the image and trace onto paper.
- Cut out the eagle and place on wall or ceiling.
- Students can stand next to the image and compare their size to that of an eagle.
